Saba Publisher Professional Edition

Benefits:

- Enhance the learning value of courses
- Improve content accuracy and consistency
- Save time and money with collaborative content development

Features:

- Programming-free, drag-and-drop authoring and publishing wizards to guide authors through the course-development process
- Simulation tools for creating experiential courses
- Tools to create and edit media objects such as audio, video, and animations
- One central location for all your media files; use keywords and metadata to easily search your library
- Library of interactive animations and games
- Single-click publishing to standards-based content formats (AICC, SCORM)
- Interactive video help guides to help new authors get started
- Automatically compress and convert all video and audio to Flash format
- Personalization and dynamic sequencing for adaptive content
- Unicode support for generating content in a variety of single-byte and double-byte languages
- Translation tool streamlines text translation activities
- Skinnable Flash player
- Tool to check 508 compliance
- Course delivery to iPhone and iPod Touch
- Preview/test in browsers
- Tight integration with Saba Learning and Saba Content Management
- Available in English, German, Swedish, French, Spanish, and Simplified Chinese

E-learning has delivered significant cost savings to many organizations. However, the organizations that have enjoyed the most benefits are the ones that have been able to:

- Develop engaging, compelling content in-house when they can't purchase it off-the-shelf
- Leverage subject-matter experts across the enterprise
- Develop courses efficiently with rapid authoring

Saba Publisher Professional Edition is a powerful content-creation tool that provides the simplicity, yet sophistication to develop compelling, interactive e-learning content that delivers on your learning and development goals. It is seamlessly integrated with the Saba Learning Suite so that you speed up content deployment and save time and money. With Saba Publisher Professional Edition, instructional designers and subject-matter experts alike can create online presentations, courses, and supplemental materials, all without

programming skills. Saba Publisher Professional Edition allows you to easily embed simulations, animations, images, videos, audio files, and other resources into courses and then publish the courses to a variety of delivery formats, including CD-ROM, AICC, SCORM, HTM, iPhone, and iPod Touch.

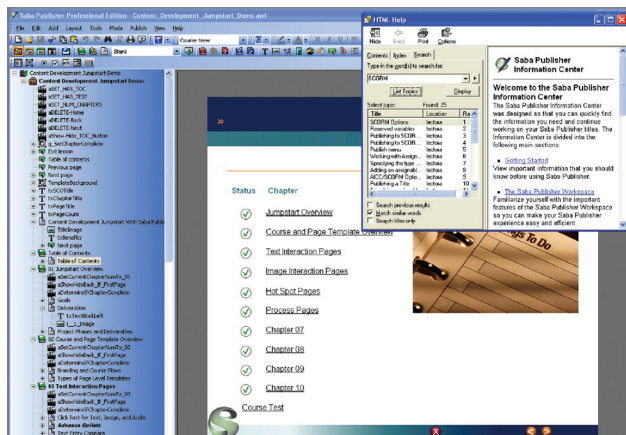

Create Compelling Content Without Learning to Program

Saba Publisher Professional Edition provides a simple drag-and-drop authoring interface designed to enable nonprogrammers to build interactive multimedia content quickly and easily. With a single click, your content can be published for delivery in a Web browser or via CD/DVD-ROM and automatically converted to dynamic HTML. You can structure the course to deliver one or more tests whenever appropriate, such as pre-tests, post-tests, and intermediate checkpoint quizzes. When the course is published, you can choose to publish to a standards-based format so you can track information about your users' performance.

Subject-matter experts can easily incorporate existing materials into interactive Web-based courses or presentations. For instance, sales and marketing professionals can use Saba Publisher Professional

Edition to create Web-based sales training courses and instantly post updates, such as new product information or FAQs, without the time and cost associated with having them done by a programmer.

To create rich, interactive content, Saba Publisher Professional Edition supports a variety of media types and provides a full suite of tools for creating and editing these objects. Saba Publisher supports all universal multimedia formats and converts and compresses audio and video to Flash format. You can also enable users to play streaming Flash or YouTube videos directly in a Saba Publisher Professional Edition title. A progress bar lets users keep track of their progress through a course.

Create and organize compelling and interactive e-learning content with Saba Publisher.

Save Time and Money by Developing Collaboratively

A tight integration between Saba Publisher Professional Edition and Saba Content Management allows content authors to work together on development projects. They can interact with the Saba Content Management repository directly from within the authoring environment, saving time while taking advantage of valuable features such as check in/out and versioning. You can reuse templates and learning objects more easily through access to a shared resource library. All of this translates to higher productivity, faster content delivery, more content reuse, and money saved.

Bring Users Into the Experience With Simulations

Saba Publisher Professional Edition provides powerful functionality for creating compelling simulations that can dramatically enhance the learning value of your courses. The Screen Camera feature lets you produce software simulations and application tutorials by recording screen activity from your desktop. A Screen Capture tool lets you capture, crop, edit, and import screenshots quickly and easily, and save them in the Flash format. To reinforce learning and engage users in the simulation experience, “hot spot” questions present the user with an image and require him or her to perform a requested action by executing the proper click path.

Go Mobile

Stay on top of cutting-edge technology and provide users with multiple ways to access courses by choosing from 10 templates and two wizards to conveniently publish Saba Publisher Professional Edition titles to the iPhone and iPod Touch.

Verify Information Mastery and Knowledge Retention

Testing is a critical aspect for verifying content mastery and knowledge retention. Using Saba Publisher Professional Edition’s test-building capabilities, you can create questions from a variety of question-type wizards, then quickly and easily assemble the questions into a test. Question types supported include essay, short answer, fill-in-the-blank, multiple choice, Likert responses, true/false, drag-and-drop, matching, and “hot spots.” In addition, you can define various behavioral properties for tests. For example, you can choose to randomize the questions within a test, display feedback immediately after the user answers a question, define conditional branching at the question level or at the test level, set a specific amount of time for the user to complete the test, and define the passing grade for the test. The test wizard also allows the flexibility of creating tests based on the cumulative knowledge gained from a course or section that must be passed before continuing on to the next section, and it allows for nongradable survey questions. Finally, you can import or export questions using the Question and Test Interoperability (QTI) standard.
